Re: Operations at KFSN's tower site at 41986 Ringtail Drive, Meadow
Lakes (Fresno County), CA

Ladies and Gentlemen:

Please be advised that effective as of December 31, 2004, the informal arrangement under which KFSN has allowed the Fresno Amateur Radio Club, Inc. ("FARC") to have equipment and operations at the Meadow Lakes tower site is hereby terminated. Accordingly, FARC must remove all equipment (including, without limitation, FARC's spike) prior to December 31, 2004, and must restore the Meadow Lakes property and buildings to their original condition, normal wear and tear excepted.

Further, please be advised that we have recently received complaints from a tenant at the Meadow Lakes tower site regarding actions by members of FARC that interfered with such tenant's operations. If we receive further complaints, we will be forced to terminate the informal arrangement with FARC immediately.

We have always enjoyed a good relationship with FARC, and we have been pleased to provide assistance for the past 10 years or so. We wish you the best in your future endeavors.

If you have any questions regarding this matter, please do not hesitate to call me at (818) 460-6342 or Daniel Simms at (559) 490-3206.

Sincerely,

Dave Converse

To all 2005 FARC Board of director members:

This is a request to place on the agenda at the Jan.3 BOD meeting a review of the club trusteeship.

In the past the club trusteeship has always been a board action item, until the 2004 year, when two club officers decided they could change trustees on their own, and then notify the board, and club, at a later time.

The trusteeship was changed in Feb. to Rob Mavis, and then the board was notified in March, and the club in April.

I would propose that the board look at at least three options:

1. Retain Rob as trustee
2. Return trusteeship to previous trustee
3. Select a new trustee.

I am asking that the board as a whole decide what to do, so there are no secrets, or actions by any two board members without the knowledge and consent of the board.

Sincerely,
John Morrice, K6MI

I picked this off the wswss net... as FARC NARC representative I would ask that you take action in the form of a letter or an appearance to protect the weak signal group's interest on 902 MHz.

I think maybe this needs to be a bod action item. I'll bring it up at the next meeting.

73,

Dave

Subject: [Wswss] 33cm Bandplan

Merry Christmas all,

It has been brought to my attention that NARRC is currently discussing the band plan for 902 Mhz. In looking at the proposed plan on the NARRC website, I see that there has been no provision for weak signal operations. In the ARRL bandplan 902 to 903 Mhz is reserved for weak signal operation. In the SCRRBA band plan for southern California 902.0000 to 902.1000 Mhz is reserved for weak signal operation.

With the availability of inexpensive surplus cellular amplifiers, I have seen an increase in weak signal activity on the band. I myself have acquired a 250 watt amplifier. Stations as far north as the bay area are working stations around California. This activity takes place between 902 and 902.1 Mhz. Coordinating repeater inputs in this portion of the band is a recipe for future interference problems.

I urge the NARCC Spectrum Management Committee at a minimum to conform to the SCRRBA band plan. This would mean no repeater inputs below 902.1125 Mhz. Looking at the coordinated repeaters, I see that there are three repeaters that may have inputs in this area. I would strongly suggest that no more repeaters be coordinated for this portion of the band.
